DEVELOPMENT Education + Health + Income	Global population percent
<b>ULTRA HIGH developed</b>	<b>12%</b>
<b>VERY HIGH developed</b>	<b>9%</b>
<b>HIGH developed</b>	<b>34%</b>
<b>MEDIUM</b>	<b>28%</b>
<b>LOW developed</b>	<b>16%</b>

THE DATA TABLES SHOW that, at every level of development, the 50 year accelerating trend today is this:

To change, act on the data tables -

UN HUMAN DEVELOPMENT (UNDP), Capabilities - Education, Health, Income plus Wealth data sources:

United Nations Development Programme, Human Development Index, 2022  
 Credit Suisse Research Institute, Global Wealth Databook, 2023

UN BIODIVERSITY TREATY (CBD), Natural resource consumption / extraction data sources:

United Nations Development Programme, Human Development Index, 2022  
 United Nations Environment Programme, International Resource Panel (IRP), Global Material Flows Database, 2023  
 UNEP International Resource Panel (IRP), Managing and conserving the natural resource base for sustained economic and social development, 2014. Sustainable “1 Earth” natural resource – fossil fuels, minerals, metals, biomass - consumption of 7 tonnes per capita per year by 2050.

UN CLIMATE TREATY (UNFCCC), Greenhouse gas data sources:

United Nations Development Programme, Human Development Index, 2022  
 Global Carbon Budget 2023v1, Territorial emissions 1850-2022  
 Global Carbon Budget 2023v1, Consumption emissions, \* consumption emissions are not known and territorial emissions are used (74 nations, 3.7% of total emissions, 8.9% of population).  
 Intergovernmental Panel on Climate Change, AR6, WG1, Climate Change (2021)  
 The Physical Science Basis. Table 5.8: Assessed remaining carbon budget. The remaining Carbon Budget (83% probability) to limit global warming to **2°C / 1.5°C** (compared to 1850-1900) is **900 / 300** GtCO2 by 1/1/2020, or **860 / 260** GtCO2 by 2021, with no overshoot and no negative emissions. 90% of budget allocated to fossil fuel emissions and cement equals **760 / 230** GtCO2 from 2021 onwards.  
 Human population in 2021 is 7.9 billion (UN World Population Prospects – 2021 revision). **760 / 230** billion tonnes of CO2 divided over 7.9 billion people is **96 / 29** tonnes CO2 / capita. When a nation's emission limit for **2°C / 1.5°C** has been exceeded, the excess amount of CO2 per capita by the end of 2023 is given; to be on-limit the excess should be removed from the atmosphere.
